

What  
should you  
do when  
there is a  
siren?

Attach a  
photo of  
the child

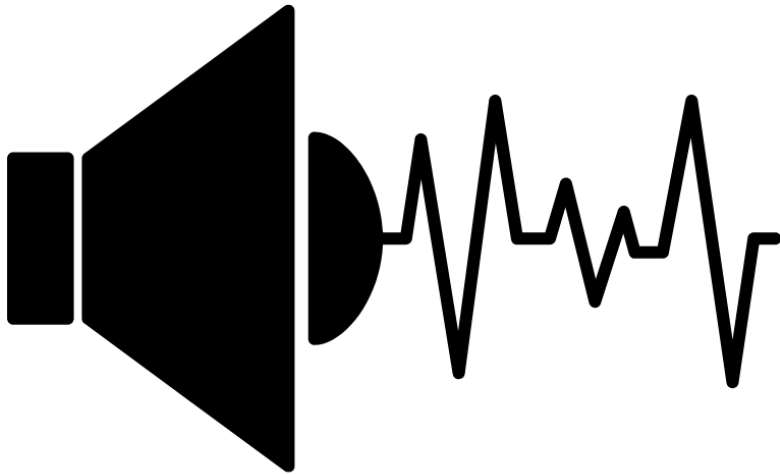

This is me. My name  
is \_\_\_\_\_ and I live in  
\_\_\_\_\_ in Israel.

Sometimes there are wars in Israel. And then rockets are launched over Israel.

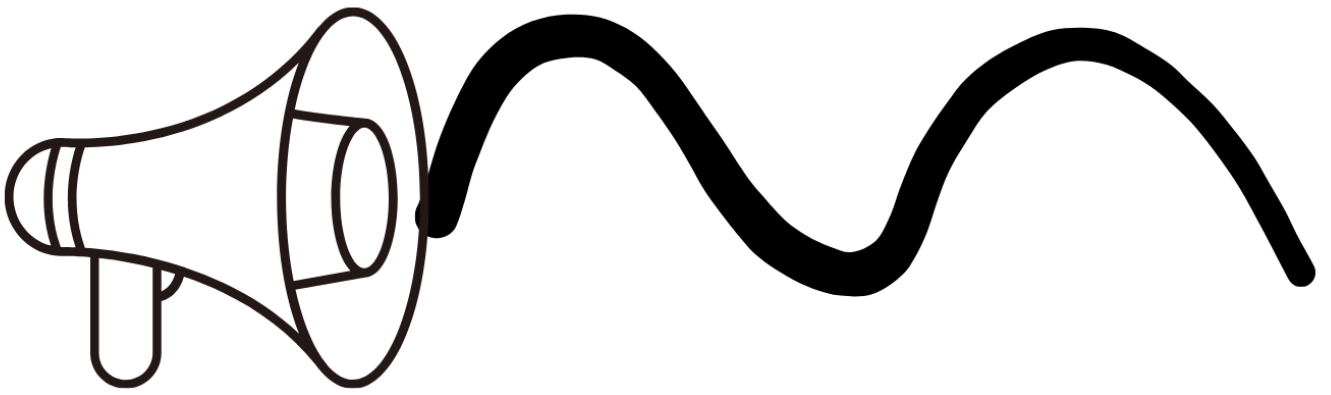

Rockets are very dangerous. They explode and can injure people and cause damage.

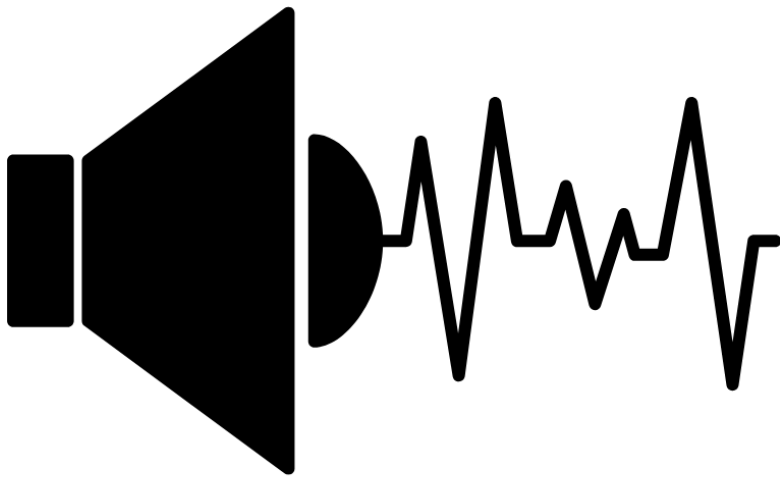

Therefore, whenever a rocket is launched, sirens are sounded to alert people to find shelter.

A siren is a sound that you hear with your ears. Sometimes the siren is very loud and sometimes quieter.

The sound the siren  
makes is a special  
sound that goes up  
and down.

What should you do  
when you hear the  
siren?

When you hear the  
siren you **STOP** what  
you are doing!

Then you go quickly  
into a safe room.

What is a safe  
room?

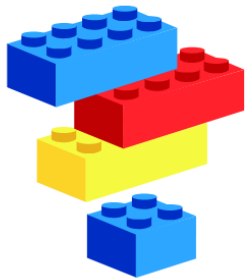

This is a room that  
keeps us safe from  
the rockets.

This room can be a bomb shelter or a safe room in your home. If you don't have either of these then you can go into the stairwell in your building.

You must wait in the safe room until you hear a loud “boom” sound. Then wait for 10 minutes before you leave the room.

After 10 minutes have passed you can leave the safe room and continue doing whatever you were doing before the siren.

What should you do if you hear the siren but you are not at home?

Then you should go into a nearby building.

If there is no building nearby then you should lay on the floor and put your hands on your head.

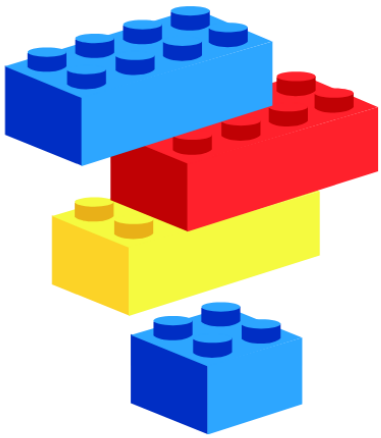

If you are in the car then get out and make your way to a nearby building or lay on the floor.

When there is a siren  
sometimes you may  
feel afraid and  
sometimes you may  
feel shocked which is  
okay.

What might help me to  
relax?
